Summary

I design and build cloud infrastructure, automation, and data pipelines for a regulated affordable-housing property management company. I built the cloud data and device migration tooling for a 400-employee Microsoft 365 tenant-to-tenant migration. I also designed and built a tiered backup and retention system for a Yardi Voyager database orchestrated by an Azure Function. Both systems allowed the company to bring the projects' construction and coordination in-house instead of relying on paying outside vendors. I also build Python and SQL data pipelines and Power Automate workflows for the company. Prior to working in software, I spent eight years supporting attorneys in the legal industry which taught me precision, deadline discipline, and how to explain technical findings to non-technical stakeholders.

Technical Skills

Languages:	Python, TypeScript, JavaScript, SQL, PowerShell, Bash, TOML, YAML
Data & Reporting:	Power BI, Power Query (M), Yardi Voyager (Scripted Reports, T-SQL)
Cloud & Platform:	Azure Cloud Infrastructure, Microsoft Suite Administration, ShareGate
Automation:	Power Automate, PowerShell Scripting
Web & Application:	React, Node.js, Express, HTML/CSS, Webflow, Supabase, GitHub Administration, Docker, DevOps
Testing & Tooling:	Jest, Vitest, Webpack, Version Control Systems

---

Experience

The Property Management Company, Inc. (formerly CCI, Inc.) — Data Analyst

2023 — Present

Data Infrastructure & Compliance

- Designed, built and implemented an automated backup and retention system for the Yardi Voyager production database on Azure, orchestrated by an Azure Function, and writing to

Azure Blob Storage on a grandfather-father-son schedule: 14 daily backups, plus weekly, monthly, and yearly tiers.

- Delivered the automated backup and retetion system in-house instead of through a third-party managed-backup engagement, with retention tiers built to satisfy a five-year retention requirement for regulated housing data.
- Build and maintain mulitple data pipelines that performs Extract, Transform, and Load before validating property and compliance data for auditing and reporting purposes.
- Develop custom Yardi Voyager scripted reports and query the underlying database directly in SQL to deliver datasets unavailable through standard reporting.
- Automate HUD affordable-housing compliance document processing, including a pipeline that parses multi-page HUD-50059 certifications into structured records for automated splitting and archiving.

Identity & Microsoft Suite

- Built an automated pipeline that synchronizes HRIS employee data into the Microsoft 365 tenant, keeping user accounts and directory records current as staff join, change roles, and depart.
- Rebuilt a Power BI dataflow that syncs employee roster data from the Paycom HR API and Microsoft Entra ID into SharePoint Lists through idempotent Power Automate upserts on a composite key.
- Support a tenant-to-tenant Microsoft 365 migration with ShareGate, coordinating copy jobs with PowerShell across multiple VMs.
- Inventorying the Microsoft 365 tenant across 37 service domains with PowerShell collectors that write dated, history-tracked (SCD Type 2) CSV snapshots.

Automation

- Automated QuickBooks-to-Yardi invoice imports: optimized Power Query transformations into three regional import files, generated and archived them with Power Automate, and delivered them to Yardi through an Azure Storage SFTP endpoint.
- Migrated business-critical Power Automate flows from a departed employee to a shared service account, consolidating them into managed solutions and optimizing them along the way.
- Built and refactored contract and certificate-of-insurance expiration flows that email Compliance and Regional Managers on 120-, 60-, 30-, 28-, and 14-day schedules, driven from SharePoint lists.

K & L Gates LLP — Practice Assistant

2021-2022

- Managed federal and state court dockets for a team of attorneys.
- Cataloged and researched document productions across active cases.

James F. Ambrose, P.C. — Legal Assistant

2014-2020

- Kept client businesses in good standing by reviewing Secretary of State records and tracking renewal deadlines.
- Analysis and presentation of annual investment account and 401k plan documents and contributions.

Projects

Shufffle (@responsedotok/shufffle)

- Zero-dependency, config driven reverse proxy for Node.js, published as a public NPM package.
- Routes and upstreams are declared in JSON; can be run directly from the command line or embedded directly in an existing server.

LE FOG (lefog.xyz)

TypeScript, Next.js, Clerk, Cloudflare R2, Vercel

- Music website and catalog for my original audio recordings, streaming six albums and 63 songs from Cloudflare R2, with free listening gated behind account sign-up through Clerk authentication.
- Deployed continuously from GitHub to Vercel, with DNS and email routing consolidated on Cloudflare, full Open Graph and SEO metadata, and a contact form protected from spam bots by a honeypot field.

Education

Alchemy Code Lab

Certificate, Full-Stack Development · 2021 – 2022 18-month immersive program; 1,000+ hours of development.

The California University of San Francisco

Bachelor of Arts, Philosophy
